Common features for EMPLOYEES and CUSTOMERS

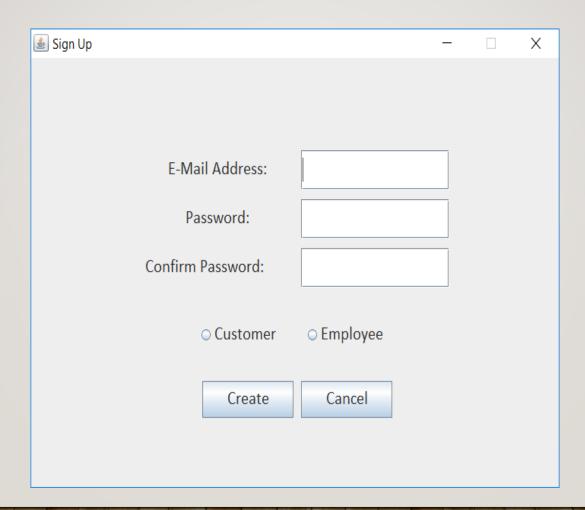

Logir

This is the first step of the application where users can login as a customer or an employee. If they don't have an account, go to sign up (next slide)

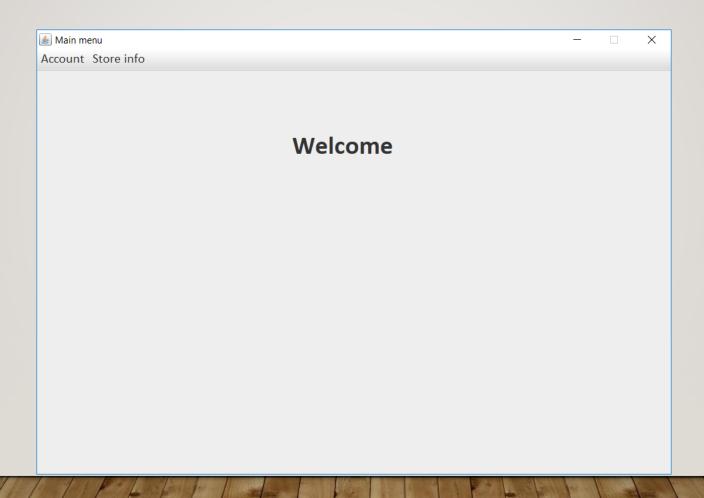

Sign Up Users can create a new account as a customer or an employee.

After creating account, they can login from the login screen (previous slide)

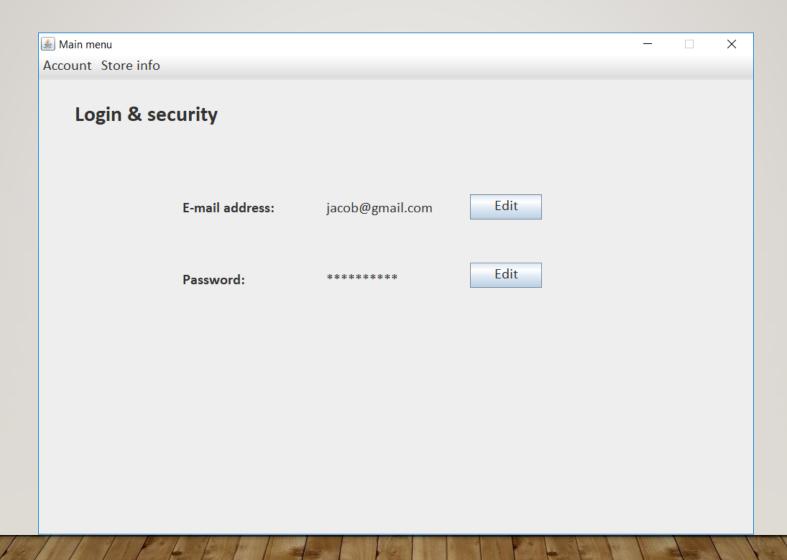

This is the landing screen after any user (customer/employee) has successfully logged in.

Security

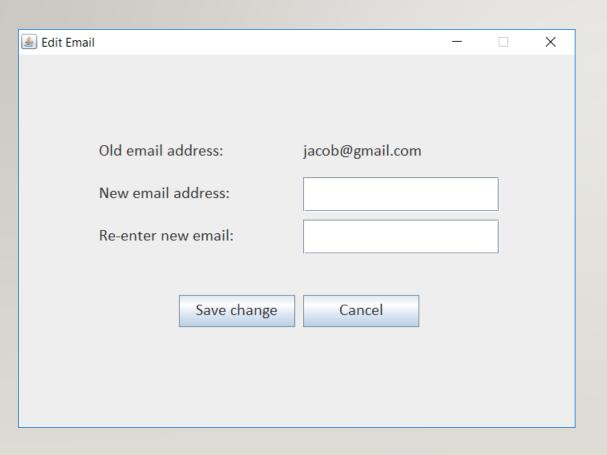

Login and Users are allowed to change their email and password from here.

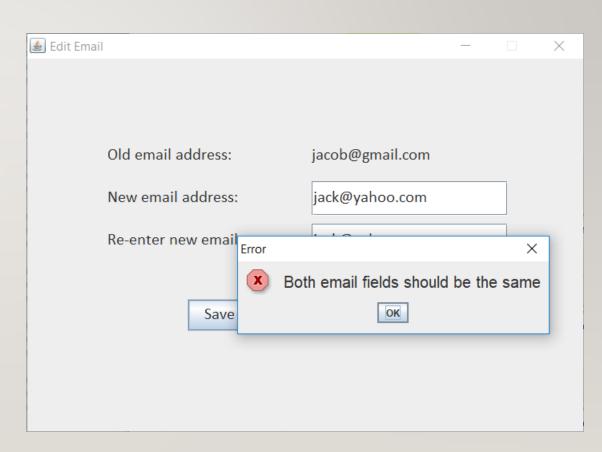

Edit Email

For changing the email, the new email needs to be provided and clicking on "Save" saves the new email to the database.

If email does not match in both the fields, it displays an error message.

Edit Password

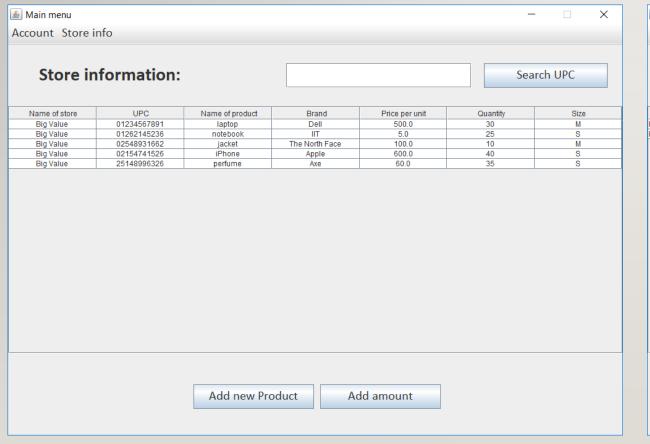

Edit For changing the password, the new password needs to be provided and clicking on "Save" saves the new password to the database.

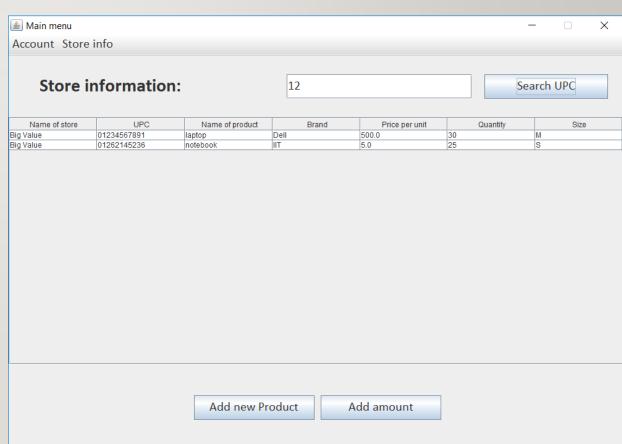

If old password does not match in "Current Password" field, it displays an error message If new password does not match in both the fields, it displays an error message.

≜ Edit Password	_	×	≜ Edit Password	_	_ ×	≜ Edit Password	- 0	×
Current password: New password:			Current password: New password:	•••		Current password: New password:	•••	
Re-enter password:			Re-enter password: Error		×	Re-enter passwo Error	>	×
Save change	Cancel		Save cha	Current password is incorre	ct	Sar	Both password fields should be the sam	ne

Features for EMPLOYEES

This displays a list of all products from all the stores that are currently available. Information | Employees can also filter this list of products based on UPC (partial matching)

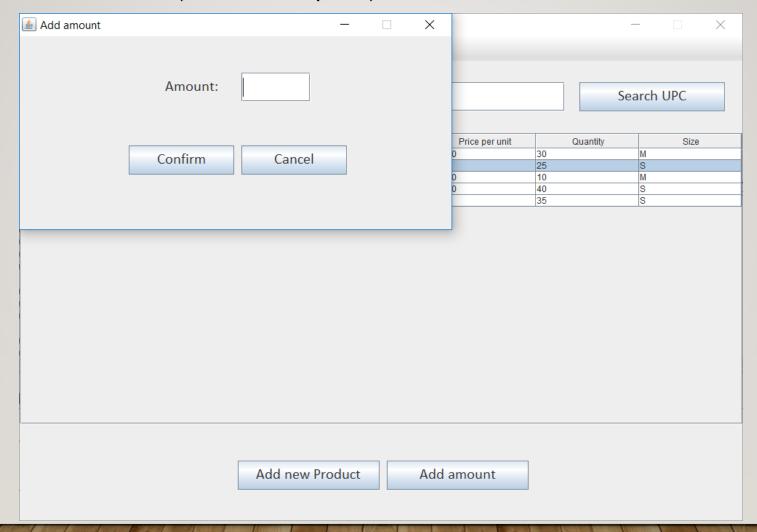

Update Quantity

This allows an employee to update a quantity of any existing product.

Note: The value provided by the employee does not replace the old value. Instead it increments the given amount to the old amount (incremental update)

Add New

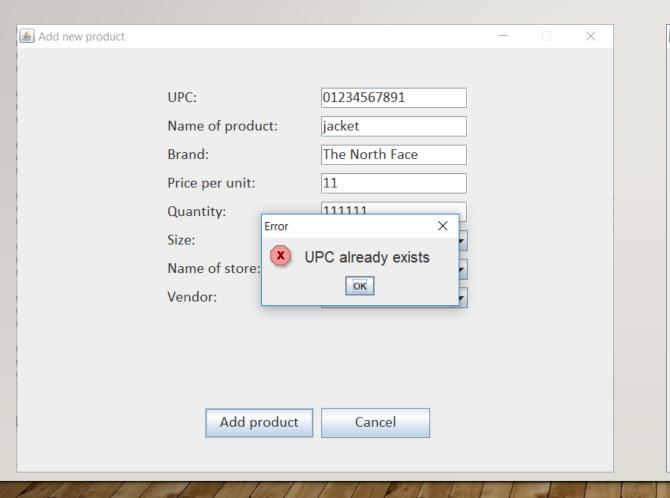

Employee can add new products by providing the details of the product and the store the product is being Product | added to and the vendor from which the store has received the product

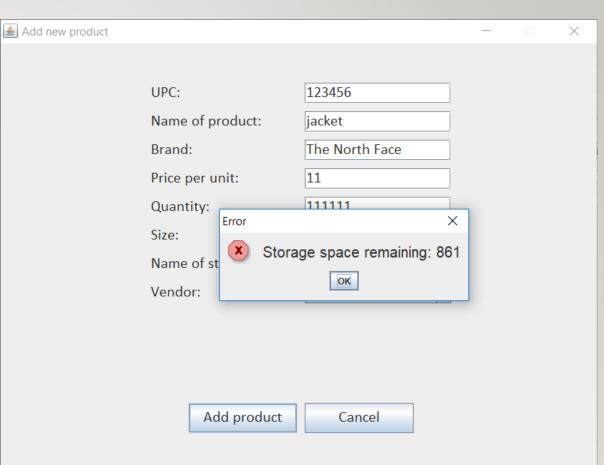

📤 Add new product			_	×
	UPC:			
	Name of product:			
	Brand:			
	Price per unit:			
	Quantity:			
	Size:	L		
	Name of store:	Big Value ▼		
	Vendor:	Vendor A ▼		
	Add product	Cancel		

Add New Product (Contd.)

Before a new product is added, the UPC is first checked if the same UPC code exists or not for another product. If it exists, then an error message is displayed.

If an employee tries to add an item with the quantity larger than the capacity of the warehouse it displays an error message along with the capacity available for the warehouse.

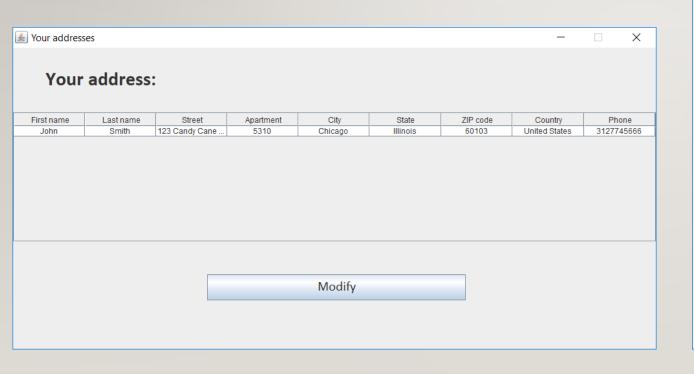

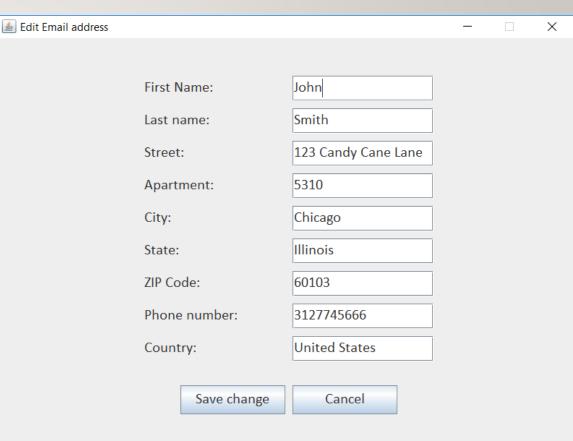

Features for CUSTOMERS

Address

Each customer has an address saved to which they would like to get the order delivered. Customers can also edit their address.

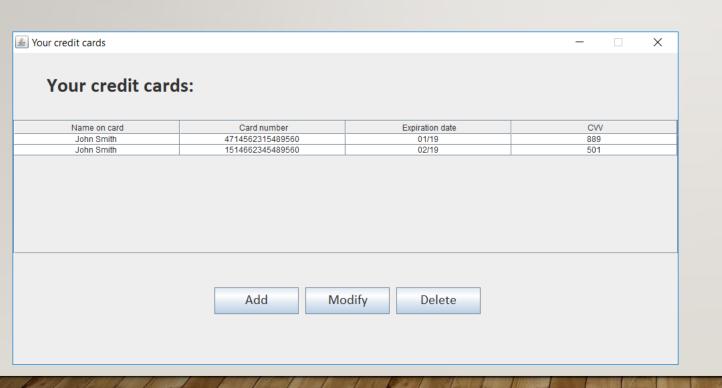

Credit Card

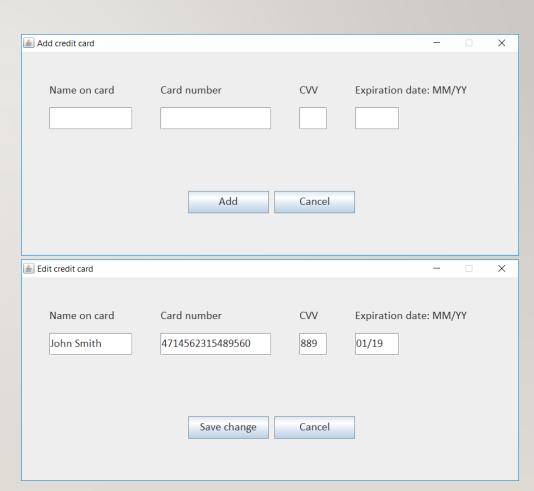

Each customer has a list of credit cards which they have saved using which they can make payments to their purchases. Users can add/modify/delete cards.

If customer chooses to add anew card, a blank popup is displayed for user to provide card details.

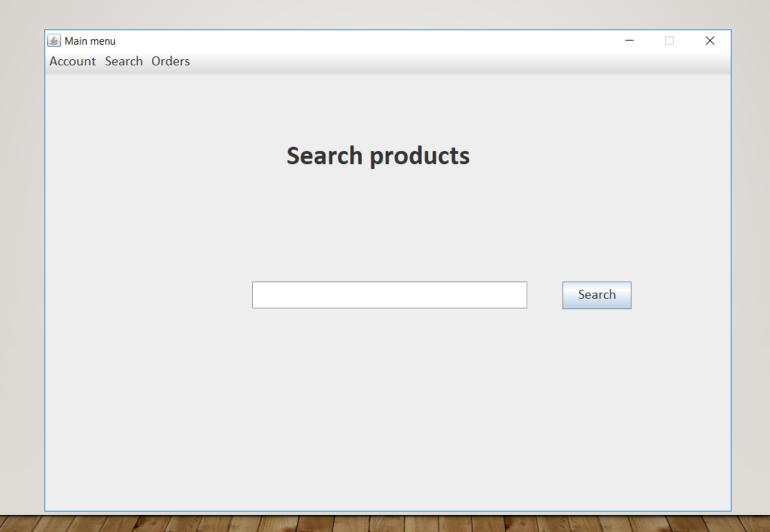

If customer chooses to edit an existing card, a pre-populated popup is displayed with the details of the card

which user wants to update.

Product | Customers can search for a product name from this screen. It is a partial search so if user searches without any Search | keyword, it displays all products.

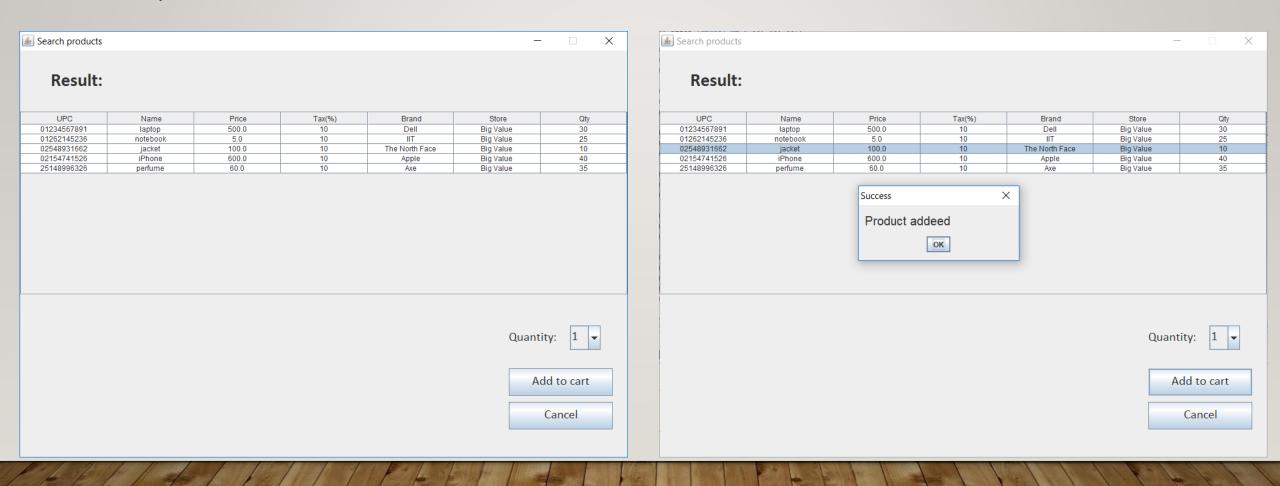

Product List

After clicking on "Search" from the previous slide, a list of products are displayed to a user.

Users can add products to cart by selecting a product, choosing quantity and then clicking on "Add to cart".

A confirmation message is displayed after being successfully added to cart.

Note: If same product is added to cart again, it does not create a new record, instead updates the quantity of the previously added product.

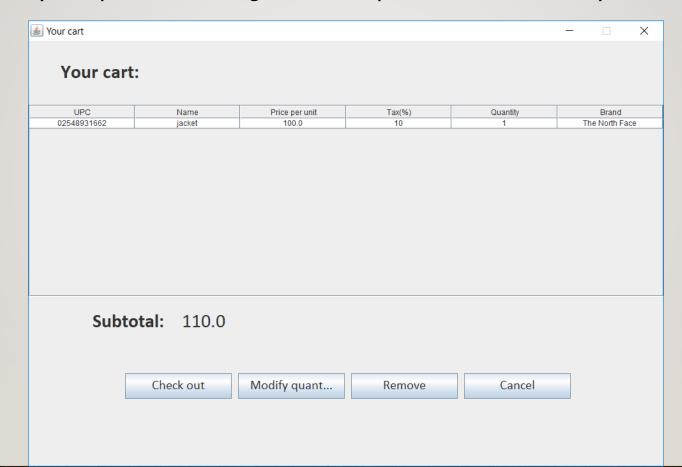

User Cart

This list displays all products which have been added to the cart along with the total amount of all products (including tax).

Users can change the quantity of any product. Products can also be removed from the cart by using the "Remove" button.

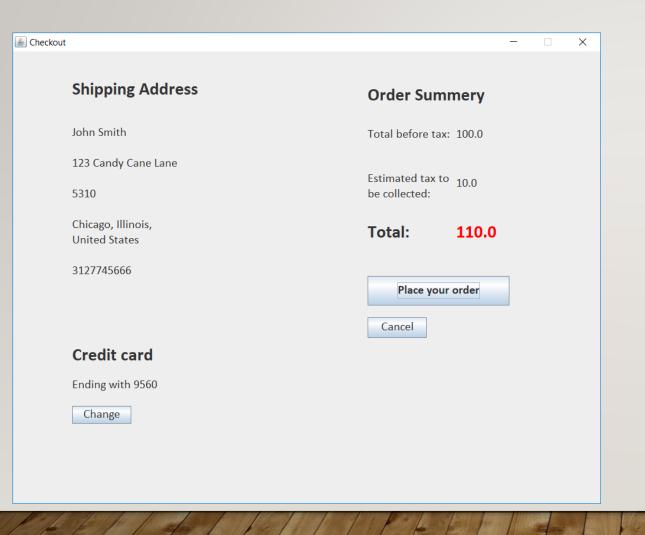

Note: If a quantity of a product is changed to 0, the product is automatically removed from the cart.

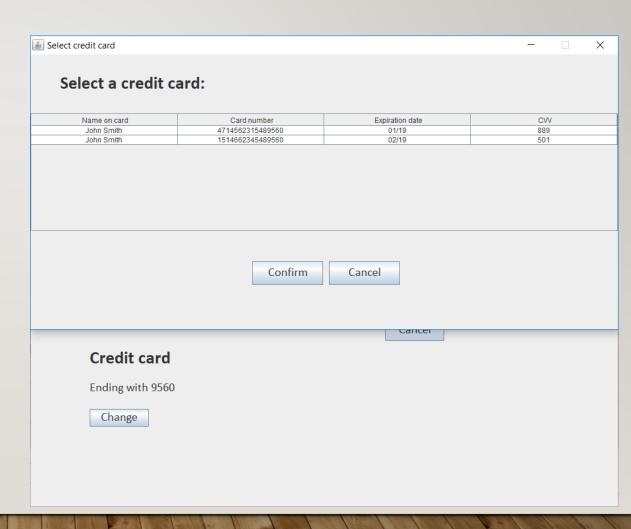

Checkout

When user checks out from the cart, it displays the current address of the user, the credit card details and the total amount of all the products + taxes.

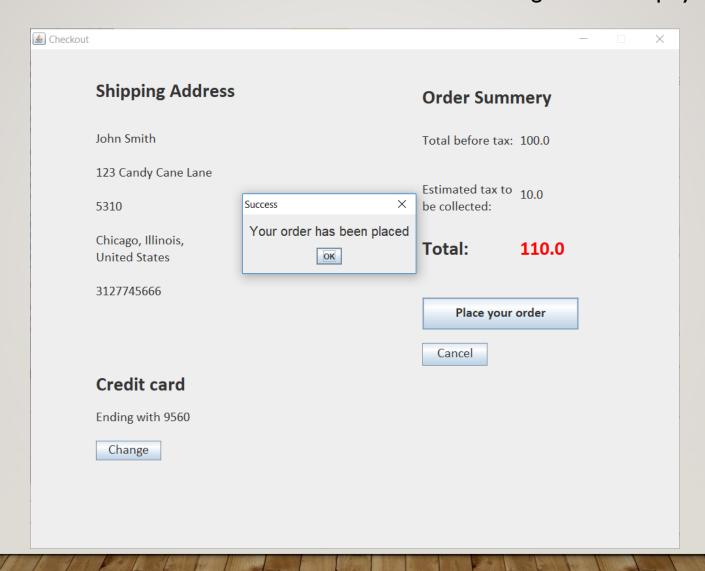

Users can change the credit card using which they would like to make the payment.

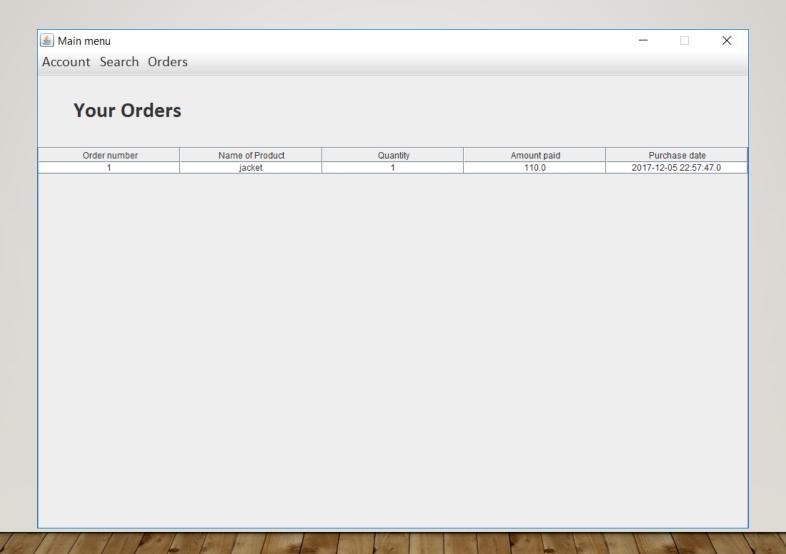

(Contd.)

Checkout After user selects a credit card for payment, user needs to confirm the order by clicking "Place your order". On dong so, the order will be confirmed and a confirmation message will be displayed.

Orders

This list displays all the orders for the logged in customer in the past. It displays the product details and the date on which it was purchased.

THANK YOU
